

Math circus

Set up these variables:

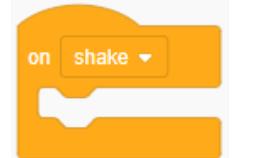

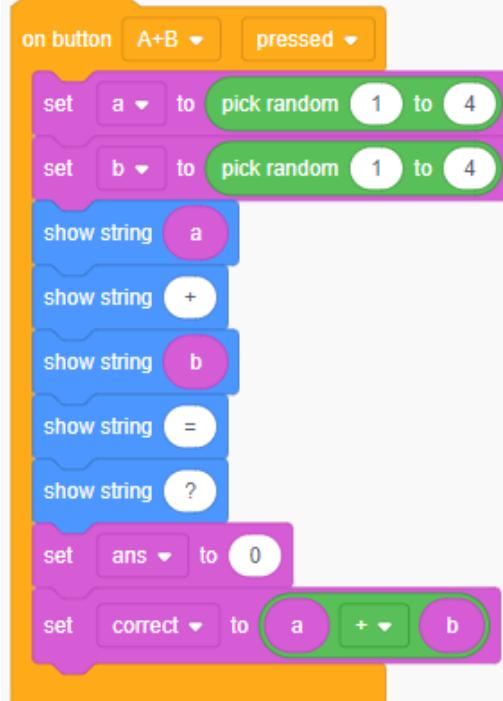

a
ans
b
correct

Add these events:

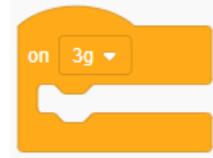

Make questions for addition, subtraction, multiplication and division.

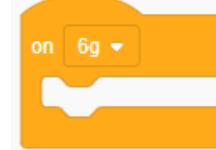

Keep the addition question as is, but use it as a model for the other questions.

Make a **clear** button.

Make a **multiplication** question.
Make the random numbers only go up to 3 to keep the questions easy.

Make a **subtraction** question.
To keep the questions positive, the a variable should randomize between 4 and 6. The b variable should randomize between 1 and 3.

Make a **division** question.
You want to keep the questions so that they have even answers. A hint is given below.
